Feed ejectors	569
Silencers for vacuum ejectors	577
Rotary vane vacuum pumps	580
Vacuum units	606
Side channel blowers	614
Accessories	617

FIPA Inline ejectors

- > Efficient vacuum generation by compressed air, close to the vacuum cup
- > Enables very short cycle times
- > Compressed air and vacuum connections at same level

Inline ejectors EIL

- > Handling of dense workpieces (max. vacuum level 85 % / 90 %): Index H
- > Handling of porous workpieces (higher suction power, max. vacuum level 60 % / 68 %): Index L
- > Compressed air-saving operation at only 3.5 bar (max. vacuum level 90 %) for the handling of dense workpieces: Index P

> See page 514

Inline ejectors EIL expandable

- > Very high mechanical strength
- > Application e.g. directly with vacuum suction plates in the wood industry
- > Direct vacuum monitoring through simple connection of vacuum switches
- > Short cycle times thanks to easy connection with a blow-off unit

> See page 520

Examples of use

- > Handling of lightweight parts
- > Pick & place applications
- > Separation systems in sheet metal or plastic manufacturing
- > Handling of electrical components

Functional principle

Ejectors work according to the Venturi principle and generate vacuum $\square V$ from compressed air $\square P$. Vacuum is created in the subsequent chamber as a result of the high flow speed after the primary nozzle. "Used" compressed air and suctioned air leave the ejector through the secondary nozzle. Either a silencer or an exhaust air duct can be connected to the outlet $\square Ex$.

Inline ejectors EIL

Compressed air and vacuum connection via quick fittings, lateral exhaust

Series 1
 Series 2
 V = Vacuum connection P = Compressed air connection Ex = Exhaust outlet

Product Description

- > Easy installation close to the vacuum cup
- > High suction power enables short gripping times

Ordering notes

- > Index H: Ejectors for non air permeable products (max. vacuum degree 85 % / 90 %)
- > Index L: Ejectors for air permeable products, resp. in case of higher leakage (increased suction, max. vacuum degree 60 % / 68 %)
- > Index P: Ejectors designed for lower feed pressure (max. vacuum degree 90 %)

Inline ejectors EIL, expandable

Compressed air, vacuum connection and exhaust via G-threads

Series EIL.05 - EIL.09

Series EIL.10 - EIL.14 optionally with silencer

TV = Vacuum connection P = Compressed air connection Ex = Exhaust outlet

Product Description

- > High suction power for short gripping time
- > Easy installation directly on the vacuum cup
- > Compact design for installation where space is limited
- > Robust aluminium body
- > Very short cycle time using optional blow-off function
- > Vacuum switch connection for high process reliability
- > Effective noise reduction through open and closed silencers

Ordering notes

Connection blow-off device

- > Connection via M5-female
- > EIL.05-09: with I18 vacuum connection
- > EIL.10-14: always be connected

Connection of check valve with blow-off device 32.638

- > Connection to the vacuum outlet

Silencers

- > EIL.05-09: Closed diffuser silencer (72.045)
- > EIL.10-14: See item number specification

Vacuum monitoring: Connection to the ejector via M5-female

- > EIL.05-09: Vacuum switch connection possible with I18 vacuum connection
- > EIL.10-14: Vacuum switch can always be connected via M5-female

Wiring diagram

FIPA Basic and Heavy-duty ejectors

> Efficient ejectors for easy connection to vacuum cups, block assembly or direct mounting to solenoid valves.

Base ejectors with graded blow-off

- > Very short cycle times thanks to fast-reacting micro valve
- > Ideally suited for robotic applications, such as Delta robots (e.g. FlexPickers)

> See page 528

Ejector boxes EBO

- > Rectangular design for space-saving parallel connection in centralised or decentralised vacuum systems
- > For handling dense workpieces (max. vacuum level 93 %): Index H
- > For handling porous workpieces (higher suction power, max. vacuum level 68 %): Index L
- > Special compressed air-saving operation for handling dense workpieces at only 3.5 bar (max. vacuum level 90 %): Index P

> See page 530

Base ejectors EBA

- > For handling dense workpieces (max. vacuum level 93 %): Index H
- > For handling porous workpieces (higher suction power, max. vacuum level 68 %): Index L
- > Special compressed air-saving operation for handling dense workpieces at only 3.5 bar (max. vacuum level 90 %): Index P

> See page 533

Base ejectors EBM

- > Easy installation directly on the vacuum cup
- > Small dimensions for installation where space is limited
- > Miniature silencer that can be dismantled for fast servicing and short downtimes

> See page 541

FIPA Base and Heavy-duty ejectors

Heavy-duty ejectors 65.102A - 65.130

- > Robust and compact aluminium housing
- > Compensation of compressed air fluctuations between 3 to 6 bar
- > Additional inlet for blow-off for short cycle times or vacuum switch connection for process monitoring (65.111, 65.130)
- > Rectangular design for space-saving parallel connection in centralised or decentralised vacuum systems

> See page 544

Examples of use

- > Handling of lightweight parts
- > Pick & place applications
- > Separation systems in sheet metal handling or plastic manufacturing
- > Handling of electrical components

Functional principle

Ejectors work according to the Venturi principle and generate vacuum **V** from compressed air **P**. Vacuum is created in the subsequent chamber as a result of the high flow speed to the primary nozzle. "Used" compressed air and suctioned air leave the ejector through the secondary nozzle **Ex**.

Base ejectors with graded blow-off

NEW

VERY SHORT RESPONSE TIME, SAFE AND GENTLE PRODUCT RELEASE

Example: Ejector EBA.08H.2-A with digital mini vacuum switch 20.040, closed diffusor silencer 72.000 and flat vacuum cup \varnothing 40 mm

Product Description

- > Small and very light for installation directly on vacuum cups for fast vacuum build-up and short gripping times
- > Blow-off pulse from a fast-reacting micro valve enables very short cycle times
- > Graded blow-off boost effect: Initially the blow-off is supported by ambient air, for placement that is both quick and gentle
- > Robust design and long service life of > 100 million switching cycles
- > M5 connection for digital mini vacuum switch to ensure reliable process monitoring
- > Ideally suited for robotic applications with very short cycles such as Delta robots (e.g. FlexPickers)

Ordering notes

- > Included in delivery: control cable 20.550, length 1,5 meter, 2-wire, free end

Technical data

Item no.	EBA.08H.2-A

Dimensions

A = Compressed air connection G1/8-female
 B = Vacuum connection G1/8-female
 C = Exhaust outlet G1/8-female
 * = M5 connection for vacuum switches

Ejector boxes EBO

Compressed air and vacuum connection via quick fittings, exhaust via rectangular silencer

Series "-S" with mechanical vacuum switch

V = Vacuum connection
 P = Compressed air connection
 Ex = Exhaust outlet

Product Description

- > High suction power for fast evacuation and short gripping time
- > Easy installation directly in the vacuum line
- > Rectangular design enables space-conserving parallel mounting of several ejector boxes
- > Replaceable silencer filter element
- > "-S" series with mechanical / electrical vacuum switch
 - Monitoring of vacuum circuits for high process reliability
 - NO / NC switching function

Notes

"-S" series with mechanical / electrical vacuum switch:

- > Factory setting: -534 mbar
- > Contact capacity: 3 A at 250 V
- > Regulating range: -200 to -667 mbar
- > Repeat accuracy: ± 50 mbar
- > Hysteresis: -200 mbar

Ordering notes

- > Index H: Ejectors for dense products (max. vacuum degree 90 %)
- > Index L: Ejectors for porous products, resp. in case of higher leakage (increased suction, max. vacuum degree 68 %)
- > Index P: Ejectors designed for lower feed pressure (max. vacuum degree 90 %)

Base ejectors EBA for vacuum cups

Compressed air connection via quick fittings, vacuum connection via R-threads, exchangeable silencer

Series with fixed air connection

Series with rotatable, angular air connection

☐ = Vacuum connection ☐ = Compressed air connection ☐ = Exhaust outlet

Product Description

- > High suction power for short gripping time
- > Easy installation directly on the vacuum cup
- > Robust aluminium body
- > Replaceable silencer filter element for short downtimes

Ordering notes

- > Index H: Ejectors for dense products (max. vacuum degree 93 %)
- > Index L: Ejectors for porous products, resp. in case of higher leakage (increased suction power, max. vacuum degree 68 %)
- > Index P: Ejectors designed for lower feed pressure (max. vacuum degree 90 %)
- > Index -W: Order code for rotatable, angular air connection

Base ejectors EBA for solenoid valves

Compressed air connection via R-threads, vacuum connection via quick fittings

Series with exhaust outlet via silencer

Series with exhaust outlet via quick fitting

☑ = Vacuum connection ☐ = Compressed air connection ☒ = Exhaust outlet

Product Description

- > Suitable for direct fitting to solenoid valves
- > High suction power for short gripping times
- > Flexible installation thanks to rotatable, angled vacuum connection
- > Replaceable silencer for fast servicing and short downtimes
- > Avoidance of product contamination with exhaust outlet through quick fitting (index MV-I)

Ordering notes

- > Index H: Ejectors for dense products (max. vacuum degree 93 %)
- > Index L: Ejectors for porous products, resp. in case of higher leakage (increased suction power, max. vacuum degree 68 %)
- > Index P: Ejectors designed for lower feed pressure (max. vacuum degree 90 %)
- > Index MV-I: Order code with exhaust outlet via quick fitting: Example: EBA.10H.1-MV-I

Base ejectors EBM - miniature size

Compressed air connection via quick fittings, vacuum connection via M-threads, exchangeable silencer element

Series with fixed tubing connection

☐ = Vacuum connection ☐ = Compressed air connection ☐ = Exhaust outlet

Product Description

- > High suction power for fast evacuation and short gripping time
- > Easy installation directly on the vacuum cup
- > Small dimensions for installation where space is limited
- > Robust design with nickel-plated brass body
- > Miniature silencer that can be dismantled for fast servicing and short downtimes

Heavy-duty ejectors

Vacuum generation under harsh conditions of use

Product Description

- > Robust and compact aluminium housing
- > Compensation of compressed air fluctuations between 3 and 6 bar
- > Additional inlet for blow-off for fast product release or vacuum switch connection for process monitoring (65.111, 65.130)
- > Rectangular design enables block assembly in centralised or decentralised vacuum systems

FIPA Multi-chamber ejectors

- > High suction power with low air consumption for handling porous workpieces
- > Multi-stage nozzle system for short evacuation times in the lower vacuum range

Multi-chamber ejectors 65.310 - 65.330

- > Robust aluminium construction
- > Very compact design for space-saving installation in handling systems
- > Low weight allows for high handling dynamics

> See page 548

Multi-chamber ejectors 65.410

- > Robust aluminium construction
- > Particularly fast product release due to additional compressed air inlet for blow-off

> See page 548

Multi-chamber ejectors 65.340 - 65.390

- > Robust aluminium construction
- > Compensation of fluctuations in compressed air supply
- > Compressed air inlet for blow-off enables fast release of the workpiece (65.410)
- > Optional air-saving function when handling dense products

> See page 550

FIPA Multi-chamber ejectors

Examples of use

- > Handling porous materials (cardboard, wood fiber boards, insulation materials, etc.)
- > Handling dense workpieces at moderate cycle times (single-stage ejectors such as basic or compact ejectors are generally preferable for short cycle times in the handling of heavy products, as these more quickly achieve high vacuum levels)

Multi-chamber ejectors with air-saving function (65.340-LSE - 65.390-LSE)

- > Handling of products with different air permeabilities (activation of the air-saving function for heavy products)
- > Switch-off of vacuum generation while assuming a “waiting position” in the event of a delay in downstream processes
- > Saving compressed air when using multi-chamber ejectors for the supply of vacuum tanks

Functional principle

Prior to discharge into the atmosphere, the compressed air flows through a series of several connected nozzle chambers. In this way the kinetic energy of the supplied compressed air generates a partial vacuum in each of the chambers. These ejectors set themselves apart from single-stage ejectors such as basic or compact ejectors thanks to their lower consumption of compressed air despite the same suction power.

Multi-chamber ejectors

Product Description

- > Handling of air-permeable products, or for high leakages
- > High suction power for short evacuation times and fast vacuum build-up
- > Low space requirements due to small construction size (65.310 - 65.330)
- > Particularly fast product release due to additional compressed air inlet for blow-off (65.410)
- > Noise-optimised operation due to open silencer
- > Industry examples: packaging and printing

Multi-chamber ejectors

High suction power for fast vacuum build up with porous workpieces

NEW

Application example: Multi-chamber ejector with vacuum gauge 91.001 (mounting on front or rear side)

Application example: Multi-chamber ejector 65.340-LSE with air saving function

Product Description

- > High vacuum level at low feed pressures, and thus particularly efficient use of compressed air as well as suitability for fluctuating air pressure levels
- > Handling of porous products, or for high leakages
- > High suction power for short evacuation times in the lower vacuum range
- > Noise-optimised operation due to open silencer
- > Industry examples: packaging and printing

Air saving function (Index LSE)

- > Saving compressed air during handling of dense workpieces
- > Examples of use:
Automatic switching off of vacuum generation during pick-and-place applications of dense workpieces if e.g. downstream processes are delayed. Saving compressed air when using the multi-chamber ejectors for feeding vacuum tanks.

Notes

Construction / operation (Index -LSE):

- > Combination of pneumatic control valve with spring return and normally closed (NC) pneumatic vacuum switch
- > Setting target vacuum values by means of setting screw
- > Compressed air is conveyed through the valve to the compressed-air inlet of the injector; there is a partial airflow at input 1 of the vacuum switch
- > When set target vacuum is reached, vacuum switch opens, compressed air from input 1 is conducted to the control valve via output 2 and closes it - the vacuum generation is stopped
- > If the vacuum level has reached the hysteresis value (see table), the vacuum switch closes again and the spring opens the control valve - vacuum generation is activated again
- > Please note: The air saving function does not work with porous products, or in the case of high leakage

Ordering notes

- > Seals optionally available in NBR as standard
- > Optionally available in EPDM or Viton upon request
- > Included in scope of delivery: two mounting brackets and G1/4"-AG - Ø 10 mm quick fitting for compressed air connection

When ordering please specify

Air saving function

Item no.	Design
65.340	without air saving function
65.340 -LSE	with air saving function

Already built in for 65.340-LSE to 65.390-LSE.

If the LSE is integrated in already delivered structurally identical ejectors without an air saving function, a non-return valve, item no. 32.662, is necessary at the compressed air input. For conversion of existing ejectors please consult the FIPA technical sales department.

For 65-380-LSE and 65.390-LSE:

It is recommended particular to consult FIPA technical sales department as to whether an air saving function is useful in the application.

Ejectors with air saving function EMM

Ejectors with air saving function EMM

Energy saving function by integrated pressure control

SAVES UP TO 50 % OF ENERGY

Ejector EMM integrated into gripper housing for Delta robots with Varioflex® bellows vacuum cups and workpiece

V = Vacuum connection
 P = Compressed air connection
 Ex = Exhaust outlet

Product Description

- > Handling of dense and porous workpieces
- > Within the supply pressure of 4 - 8 bar, the ejector works at 3.5 bar with same high performance
- > Energy saving increases along with the difference between supply pressure and operating pressure
- > Electronic vacuum and blow-off control for short cycle times
- > Manual adjustment of the blow-off flow rate using a setscrew
- > Very compact design with integrated open silencer
- > Dust-resistant design, no additional filters required

Ordering notes

- > Two model ranges available
 - EMM.90: for dense workpieces, max. vacuum level 90 %
 - EMM.60: Higher suction power for porous workpieces, max. vacuum level 60 %
- > Optionally available with integrated check valve to maintain vacuum in case of power failure

Ejectors with air saving function EMA

Double energy efficient by integrated pressure control and electronic air saving function

SAVES UP TO 97 % OF ENERGY

Ejector EMA with bellows vacuum cup and workpiece

Product Description

- > Electronic air saving function reduces operating costs by up to 97 % with dense workpieces
- > Pressure regulation energy-saving function at constant 3.5 bar reduces operating costs by up to 50 % with porous workpieces
 - Energy saving increases along with the difference between supply pressure and operating pressure
- > Electronic vacuum and blow-off control for short cycle times
- > Manual adjustment of the blow-off flow rate using a setscrew
- > Very compact design with integrated open silencer
- > Dust-resistant design, no additional filters required

Notes

- > If the ejector experiences power failure, the workpiece is only held by the vacuum between non-return valve and product surface
- > Vacuum and blow-off are controlled using a single signal

Technical data

Item no.	EMA.90x14
Nozzle diameter [mm]	1.4
Feed pressure [bar]	4 - 8
Internal working pressure [bar]	3.5
Final vacuum [%]	90
Suction power [NI/min]	70
Air consumption [NI/min]	90
Protection class	IP65
Operating principle	NC
Control voltage	24 VDC (adjusted) ± 10 %
Current consumption for vacuum and blow-off feature [mA]	30 (0.7 W)
Operating temperature [°C]	10 - 60
Weight [g]	130
Suitable connector cable	20.502 (p.717) 20.501 (p.717)

Vacuum generation | Compact ejectors

Ejectors with air saving function EMA

Pneumatic diagram

Solenoid valve NC

Solenoid valve NO

Operating principle EMA series

1. Gripping the workpiece

The vacuum solenoid valve ② starts the cycle. Venturi nozzle ③ is supplied with compressed air and generates the vacuum to grip the item quickly with the vacuum cup → short-term energy consumption.

2. Operations on the suctioned item

The vacuum level is continually monitored by the vacuum switch ⑥. When the vacuum threshold limit V1 (65 %) is reached the signal "Item gripped" is triggered. This gives a green light for the scheduled operation (transfer, processing etc.). When the vacuum reaches the threshold limit V2 (75 %), the compressed air supply to the venturi nozzles via the solenoid valve ⑤ is interrupted. Energy consumption falls to zero. The item remains gripped because of the vacuum that remains because of the closed non-return valve. Tiny leakages often lead to a slow release of the vacuum. If the vacuum falls to the threshold limit of 65 %, new vacuum is briefly generated, i.e. until the threshold limit V2 (75 %) is reached.

3. Releasing the workpiece

At the end of the procedures blow-off is triggered. The blow-off valve ⑧ generates an air jet that closes the closing valve ⑩. This blows off the item using the air pressure regulator ⑨ so that it can be released more quickly.

Nozzle diameter and energy saving potential

Air saving control cycle self-adaptation

Cycle 1:
Deals with an air tight product under the influence of LSA, resulting in optimum energy savings.

Cycle 2:
The porous product generates leaks that provoke repeated intermittent vacuum regeneration. The anomaly is automatically detected, and the cycle goes on but without LSA. An LSA missing signal is then emitted and displayed, and production goes on.

Cycle 3:
Illustrates the automatic return to the LSA cycle as soon as leaks are eliminated due to air tight products. Vacuum level will be maintained.

The compact-ejector EMA thus provides maximum energy saving, without any limitations to the performance and functioning of the overall production system.

Without automatic air saving system			With automatic air saving system		
Nozzle diameter [mm]	Suction power [NI/min]	Air consumption [NI/min]	Suction duration (65 % vacuum) [sec]	Suction duration (75 % vacuum) [sec]	Air consumption [NI/min]
1	29	44	2.38	3.33	2.2
1.2	45	65	1.53	2.15	2.2
1.4	70	90	0.99	1.38	2.2

> Automatic air saving system activation allows a larger tube diameter to grip more quickly without increased consumption.

Example of the air saving potential

The examples show how the automatic air saving function reduces the energy demand:
 > 75 % energy saved during product transfer
 > 97 % energy saved during holding products while they are further processed or treated
 The investment will often amortise itself within a couple of months.

Gripping + Transfer (Nozzle Ø 1.4 mm, Evacuation of 0.2 l)

Phase	Duration	Air consumption		air saving potential
		without "LSA"	with "LSA"	
Grip	0.28 s	0.4 NI	0.4 NI	75 %
Transfer	1.20 s	1.8 NI	0	
Placement	0.14 s	0.2 NI	0.2 NI	
		2.4 NI	0.6 NI	

Fixation + Operation process (Nozzle Ø 1.4 mm, Evacuation of 0.4 l)

Phase	Duration	Air consumption		air saving potential
		without "LSA"	with "LSA"	
Fixation	0.55 s	0.8 NI	0.8 NI	97 %
Operation process	60 s	90 NI	0	
Placement	0.14 s	0.2 NI	0.2 NI

Vacuum generation | Compact ejectors

Ejectors with air saving function EMA

Wiring diagram

- > Output signal "object gripped", 24 VDC, switching output NO, switching current 125 mA, PNP
- > Adjustable side output:
 1. Signal without air saving function, +5 V switching output NO: eg. signal for failure indication
 2. Signal "vacuum level", analogue, 1-5 VDC of measuring range

Dimensions and mounting options

> Mounting sideways

> Mounting in the front

> Block mounting on a DIN rail

> EMA.FIX-B endpieces, with connecting screws and closing pins for collecting main

- P = Compressed air connection V = Vacuum connection ① = 2 Bore holes for 4 mm screws ② = M8 plug ③ = 2 Continuous screws
- ④ = Mounting plate with 4 screws (Item no. EMM.FIX-V)
- ⑤ = Mounting plate for DIN rail with 4 screws (Item no. EMM.FIX-D) - on plate per EMM-modul

Evacuation time [sec.] for 1 liter at vacuum level

Item no.	55 %	60 %	65 %	70 %	75 %	80 %
EMA.90x14	0.73	0.85	0.99	1.16	1.38	1.7

Ejectors with air saving function EKP and EKPP

Energy saving function by integrated pressure control

SAVES UP TO 50 % OF ENERGY

Check valve with wire mesh to keep out impurities

☐ = Vacuum connection P = Compressed air connection Ex = Exhaust outlet

Product Description

- > Handling of dense and porous workpieces
- > Within the supply pressure of 4 - 8 bar, the ejector works at 3.5 bar with same high performance
- > Electronic vacuum and blow-off control for short cycle times
- > Manual adjustment of the blow-off flow rate using a setscrew
- > Low noise emissions as, starting from 4 bar, outlet pressure is independent of inlet pressure
- > Open silencer further reduces the noise level and is completely maintenance-free

Notes

- > Ejector with digital vacuum switch 20.021 for process monitoring (Index „-VA“)
- > The vacuum switch can be freely adjusted after mounting the ejector

Ordering notes

- > Index EKP: with control valves
- > Index EKPP: without control valves
- > The performance data are identical for the two series
- > The optional check valve maintains the vacuum in cases of compressed air failure for a certain period of time to prevent sudden dropping of the workpiece
- > On request, ejectors are also available normally (current free) open (NO):
In case of power failure, compressed air line remains open and workpiece is held by the gripper

Notes:

Lined writing area for notes

FIPA Feed ejectors

- > Secure transport of bulk material
- > Extraction of non-aggressive gases or steams
- > Ideal source of vacuum in applications with high leakage

Feed ejectors for large throughput

- > Contamination-resistant construction for reliable operation, even under harsh operating conditions

65.701 - 65.731

- > High vacuum level
- > For overcoming larger height differences
- > Suction volume and vacuum level can be adapted to level of compressed air pressure

65.742 - 85.802

- > Low vacuum level
- > For overcoming smaller height differences
- > Suction volume and vacuum level dependent on level of compressed air pressure

> See page 570

Feed ejectors for small throughput EFO

- > Low suction power due to medium vacuum levels
- > Various connections for inlets and outlets as well as for compressed air supply
- > Suitable filters or collection vessels available as accessories

> See page 574

Examples of use

- > Gentle product feeding thanks to axial arrangement of inlet and outlet
- > Vacuum supply for vacuum cups used to handle porous workpieces, or for a high degree of leakage
- > Electricity-free alternative to motor-driven vacuum pumps or side channel blowers
- > Continual operation without heat development as there are no moving parts

Functional principle

Feed ejectors - rotatable

High suction power for handling with high leakage

ALSO AVAILABLE IN STAINLESS STEEL FOR FOOD INDUSTRY OR ABRASIVE MEDIA

Product Description

- > High suction power for safe handling of air-permeable products or generally in the presence of high leakage
- > Gentle transportation of powdery substances or small-size products such as granular material, coffee, flour
- > Extraction of non-aggressive vapors and gases
- > Volume of suction air and required vacuum level can be adjusted by turning the suction pipe, allowing for an energy efficient increase in performance without increasing air consumption
- > Can even be used in rough conditions thanks to the robust, maintenance-free construction without moving parts
- > No build-up of heat because of no moving parts and therefore no risk of ignition during transport
- > High maximum vacuum level for over coming larger height differences
- > Stainless steel designs for easy cleaning when transporting foods and for handling abrasive media
- > Extremely flexible integration into gripper systems thanks to any mounting position

Notes

- > The transport length depends on the feed pressure, the transport volume and the transport goods
- > Rule of thumb:
 - Tubing length from suction point to ejector ~ 2/3 of the total tubing length
 - Tubing length from ejector to point of use ~ 1/3 of the total tubing length
- > Prior to installation a test at customer site is recommended
- > For longer distances, multiple ejectors can be serially connected

Vacuum generation | Feed ejectors

Feed ejectors EFO - with a small passage

Feed ejectors EFO - with a small passage

Compressed air connection via quick fittings, outlet via R-threads, exhaust via R-threads or quick fittings

Exhaust via R-threads

Exhaust via tubing connection

V = Vacuum connection P = Compressed air connection Ex = Output

Product Description

- > Transport of powdery or granular materials
- > Extraction of non-aggressive vapors and gases
- > Medium vacuum level for overcoming larger height differences
- > No build-up of heat because of no moving parts and therefore no risk of ignition during transport
- > Maximum availability thanks to robust, maintenance-free design
- > Rotatable, angled compressed air connection and any mounting position for flexible system integration

Notes

- > The transport length depends on the feed pressure, the transport volume and the transport goods
- > Rule of thumb:
 - Tubing length from suction point to ejector ~ 2/3 of the total tubing length
 - Tubing length from ejector to point of use ~ 1/3 of the total tubing length
- > Prior to installation a test at customer site is recommended
- > For longer distances, multiple ejectors can be serially connected

Silencers with filter function

Series 1: Brass construction with stainless steel wire fabric

Series 2: Brass construction with sintered material

Product Description

- > Combination of silencer and air filter
- > 72.015 - 72.021: Also suitable as protective filter for 3/2-way valves at ventilation / blow-off inlet (under contaminated environmental conditions)
- > 72.022 - 72.027: Can be mounted directly into the vacuum cup or the fitting, temperature resistant up to 120 °C

FIPA Rotary vane vacuum pumps

Rotary vane vacuum pumps - oil-free

- > Handling of dense workpieces in dry areas
- > Suitable for load alternation and continuous operation
- > Available in single-phase and three-phase designs
- > Any installation position
- > Very low maintenance

> See page 582

Piston pumps

- > Small output at compact design
- > Suitable for dry and wet areas
- > Long-life and low maintenance thanks to the permanently lubricated piston seals
- > Oil-free operation
- > Also suitable as compressors

> See page 592

Rotary vane vacuum pumps - oil-lubricated

- > Handling dense and porous workpieces
- > Partially suitable for applications in wet areas
- > Suitable for continuous operation in product-dependent vacuum levels
- > Available in single-phase and three-phase designs
- > Horizontal installation position

> See page 594

Centralised vacuum units

- > Supply of several modules via a central station
- > Made up of one to three oil-lubricated vacuum pumps
- > Incl. vacuum tank and electronic control

> See page 606

FIPA rotary vane vacuum pumps

Accessories

Vacuum tanks

- > As storage device for compressed air, vacuums and non-aggressive liquids
- > Efficient compressed air/vacuum usage (energy saving, protection of the unit)
- > For compressed air/vacuum systems with highly fluctuating consumption

> See page 617

Vacuum generation according to the displacement principle

- > A cylindrical rotor ① rotates eccentrically in a circular cavity ②.
- > The rotary vanes ③ are pushed against the outer walls of the cavity by centrifugal force, sealing the chambers that are created by this motion.
- > During rotation, the expanding chambers draw in air on the vacuum side $\square V$.
- > The suctioned aspirated air is then released via the exhaust $\square Ex$.

Performance characteristics

- (a) Characteristic of ejectors
- (b) Rotary vane vacuum pumps achieve a very good ultimate vacuum along with a high flow volume
- (c) Characteristic of side channel blowers

Rotary vane vacuum pumps - oil-free

Handling in dry areas

Product Description

- > High reliability and low maintenance costs owing to simple design
- > Universal application: Continuous operation at different vacuum levels
- > Compact design and low weight

Ordering notes

- > Available in single-phase and three-phase designs (Index -1 or -3)
- > Included in scope of delivery:
 - Silencer on suction side
 - DT.3C-1: Thermal protection 130 °C
 - DT.6, DT.10: Safety filter on suction side
- > Delivery without electric cables

> Suction power against vacuum level at 50 Hz

> Suction power against vacuum level at 60 Hz

Piston pumps

Product Description

- > High volume flow and high vacuum level at low installation space
- > Can also be used as compressor
- > Low-vibration operation
- > Robust design
- > Long service life and maintenance-free operation due to permanently lubricated piston seals
- > Suitable for dry and moist air

Notes

- > A 3/2-way valve must be installed at the inlet in case of pressure-vacuum alternating operation

Technical data

Item no.	KE.1.9A-1
Suction power at 50 Hz [m ³ /h]	1.9
Suction power at 60 Hz [m ³ /h]	2.2
Final vacuum [%]	89
Power supply [V]	220 - 240
Rated power at 50 Hz [kW]	0.2
Noise level at 50 Hz [dB(A)]	50
Noise level at 60 Hz [dB(A)]	52
Operating temperature [°C]	40 - 45
Weight [kg]	7.1
Suitable Pre-filters	FB 5 (p.626)

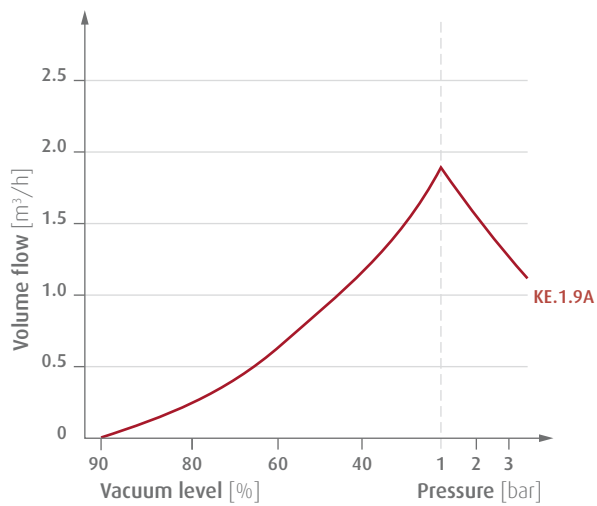

Dimensions

Diagrams

> Volume flow against pressure

Rotary vane vacuum pumps - oil-lubricated

Product Description

- > Very high final vacuum level
- > Drives with multi-range voltages
- > Especially suited for the evacuation of small closed containers
- > Efficient damping and oil recovery system prevents oil mist and reduces sound level
- > Compact and lightweight design for low space requirements or installation on moving devices (sufficient ventilation needs to be ensured)
- > Pump is cooled via mounting fan
- > Horizontal mounting position

Notes

- > Continuous operation only under full load (min. 99.8 % vacuum), otherwise, risk of oil discharge, no gas ballast
- > For operation under moist conditions please consult FIPA

Ordering notes

- > Available in single-phase and three-phase designs (Index -1 to -3)
- > Included in scope of delivery: Condensate exhaust filter oil SW 40, thermal protection 130 °C (with single-phase motor)

Portable vacuum units with condensate discharge for liquids

Product Description

- > Portable system for vacuum supply for i.e. suction cups or fixing tools
- > Specially developed for the extraction of non-aggressive liquids such as e.g. cooling lubricants in the glass, marble and CNC machine markets

Ordering notes

Included in scope of delivery:

- > Vacuum tank
- > Oil-lubricated vacuum pump
- > Vacuum gauge
- > Condensate trap filter
- > Non-return valve at the tank inlet to separate the pump for maintenance
- > Float level control for automatic discharge of the collected liquid
- > Condensate discharge
- > Non-return valve and gas ballast for trapping and discharge the condensed water from the oil at standstill

Vacuum units with one pump

Product Description

- > Centralised vacuum supply with horizontal buffer tank

Ordering notes

Included in scope of delivery:

- > Oil-lubricated rotary vane pump with integrated oil mist separator at the outlet
- > Horizontal vacuum tank with condensate discharge valve
- > Particle filter to protect the pump
- > Non-return valve to maintain the vacuum when the pump is at standstill
- > Control panel (400 VAC, 50/60 Hz) with current protection, pressure sensor and PLC for manual and automatic operation
- > Switching cabinet IP 55
- > On request: Optional filter between the non-return valve and the vacuum system

Vacuum units with two pumps

Product Description

- > Centralised vacuum supply with two pumps and horizontal buffer tank
- > Redundant system that enables maintenance work to be done during operation

Ordering notes

Included in scope of delivery:

- > Two oil-lubricated rotary vane pumps with integrated oil mist separator at the outlet
- > Integrated non-return valve at the suction inlet to maintain the vacuum at standstill
- > Horizontal vacuum tank with condensate discharge valve
- > Two manual valves at the tank inlet to separate the pump from the system for maintenance
- > Particle filter to protect the pump
- > Control panel (400 VAC, 50/60 Hz) with current protection, pressure sensor and PLC for manual and automatic operation
- > Switching cabinet IP 55
- > On request: Optional filter between non-return valve and load end

Vacuum units with three pumps

Product Description

- > Centralised vacuum supply with three pumps and vertical buffer tank
- > Redundant system that enables maintenance work to be done during operation

Ordering notes

Included in scope of delivery:

- > Three oil-lubricated rotary vane pumps mounted on one frame to conserve space
- > One vertical vacuum tank with condensate discharge valve and additional bypass system to separate the system
- > Three non-return valves integrated in the suction line of the pumps to maintain vacuum at standstill
- > Three particle filter elements to protect the pumps
- > Two independent control panels (400 VAC, 50/60 Hz) with current protection, pressure sensor and PLC for manual and automatic operation
- > Switching cabinet IP 55
- > Optional GFB hygiene filter element (Standard EN 773/3) with bypass system between the non-return valve and the load

FIPA Side channel blowers

- > High suction power for very porous workpieces, or to overcome high degrees of leakage
- > External vacuum supply for foam and bag grippers

On request

Side channel blowers - single-stage and double-stage

- > Handling of porous workpieces, such as cardboard boxes or untreated wooden plates
- > Double-stage design offers higher suction power at the same vacuum level for effective leak compensation
- > Suitable for use in wet and dry areas
- > Suitable for continuous operation
- > Horizontal and vertical installation
- > Practically maintenance free

Accessories

Additional silencer for side channel blowers

- > Open silencer for "further processing" of the exhaust air

> See page 618

Vacuum pressure changeover valve

- > Fast switching between vacuum mode (vacuum) and pressure mode (blow-off)
- > Enables short cycle times
- > Installation of a vacuum relief valve at the suction inlet is recommended

> See page 619

FIPA Side channel blowers

Examples of use

- > Vacuum generation for the TC/TL series foam grippers or TG series bag grippers
- > Handling of cardboard packaging with vacuum cups
- > Pneumatic conveying
- > Extraction of particles which are not too coarse, such as wood dust in woodworking

Principle of operation

- > Side channel blowers use the momentum principle for generating vacuums or compressed air
- > The rapidly rotating blade wheel ① accelerates the air within the annular housing ②
- > In addition, a swirling motion is created in the side channels which increases efficiency
- > The shape of the inlet channel [V] or the outlet channel [Ex] allows air to be suctioned in or expelled

Performance characteristics

- (a) Characteristic of ejectors
- (b) Characteristic of vacuum pumps
- (c) Side channel blowers have an extremely high output, but achieve only a low ultimate vacuum

Notes:

Lined area for notes, featuring a thick vertical red line on the left and horizontal grey lines.

Vacuum tanks 5 - 60 liters

Product Description

- > Storage for compressed air, vacuum and non-aggressive liquids
- > Energy saving assembly of compressed air and vacuum
- > For compressed air / vacuum networks with fluctuating demand
- > For preventing frequent startup of the compressor system
- > To cover high demands short-term
- > As supplement to screw / piston compressors, rotary compressors or vacuum pumps

Notes

- > 92.001: Two fittings in line with G1/2-female with 90° offset
One fitting per front face with G1/4-female
- > 92.002 to 92.004: One fitting in line with G1/2-female
2 x one fitting with G3/4-female and distance 120 mm and 1 x one fitting with G3/4-female on the front faces

Electro-pneumatic reversing valves for side channel blowers

Product Description

- > Operation of a side channel blower as a vacuum pump for suction or compressor for blow-off
- > Blow-off volume flow is directed to the vacuum cup / load, without reversing the direction of rotation of the blower
- > Three setting positions: Suction, blow-off, neutral
- > Working principle: Rotation of a cylinder, which is operated by an electrical motor-driven actuator

Notes

- Please note for the neutral position (0°):
- > If operation with closed suction inlets cannot be excluded, a vacuum limiting valve (safety valve) must be installed before the suction inlet

Technical data
